Peter speelt hier 24. 40-34.

Kingsrow waardeert de zet 37-31 als iets beter.

Maar bij nadere analyse blijkt het verschil verwaarloosbaar klein.

Overigens zat er wel winst in als je Kingsrow laat nadenken.

Toch acht ik de kans klein dat de beste zetten met een diepte van 22 tot 28 zetten in de partij gespeeld zou zijn.

*Wim speelt 38. ... 22-28?
 Dragon Dammen vindt dit een grote fout
 (waardering +0,74 t.o.v. +0,18 voor de zet 17-21)*

*Kingsrow is wat gematigder.
 De waardering is -16 wat zelfs beter is dan de -20 voor de zet 17-21.
 Kingsrow zou spelen 38. ... 14-20 39. 25x14 10x19 40. 44-40 11-16 41. 39-34 17-21,
 waarna een volledige gelijke stand is ontstaan.*

Die gelijke stand kwam er ook in de partij.

Peter speelde 44. 47-42.

Wim mag nu niet 22-27 spelen, maar heeft dat niet eens overwogen omdat hij druk wilde zetten op schijf 24.
